Ubuntu - Africa's world view from where they derive relational, communal, societal, environmental and spiritual knowledges, values and practices – is slowly being revived as an important framework for social work in Africa and globally. In this webinar, we shall discuss some insights from a first ever survey on the use of Ubuntu in social work education and practice, as well as a focus on Ubuntu-informed ethics. We shall host three renown researchers on Ubuntu who will also draw from their edited book, 'Ubuntu Philosophy and Decolonising Social Work Fields of Practice in Africa' (Routledge, 2024).
